TURBEX TO PROMOTE LATEST AQUEOUS CLEANING EQUIPMENT

Metro Radio Arena, Newcastle - Stand C6

Turbex, the UK market leader for the supply of aqueous industrial cleaning machines and lines, will promote its ability to provide a vast range of solutions for batch or in-line finishing applications ranging from shop floor to clean room in almost any manufacturing sector.

There are over 100 standard models in the range including top- and front-loading spray washers, bench top and floor standing ultrasonic machines, precision cleaning machines with basket rotation and flood wash, and tunnel cleaning lines. Systems can be single- or multi-stage with phosphating and drying options.

The company's cleaning technology centre in Alton offers expert advice on processes, component handling and detergents as well as trials on sample components. If a standard machine does not meet a customer's needs, a bespoke system can be configured to satisfy the most exacting cleaning requirements. Surface treatment lines for anodising and chemical cleaning are also sold in the UK by Turbex.
