CLEANING AND DRYING EQUIPMENT AT MED-TECH

Turbex will be promoting top-end, highly controllable cleaning equipment for washing and drying medical instruments, prosthetics and consumables after manufacture. Established in 1981, the company is the market leader in the UK and Ireland for sales and service of such equipment and offers two ranges of aqueous machines - Elma and Mafac - that include ultrasonic and spray wash models.

The headquarters of Turbex is in Alton, Hampshire, where demonstrations and cleaning trials are carried out in a well-equipped showroom and technology centre. The emphasis is on problem-solving to meet customers' needs, especially for processing parts of complex geometry to a superior standard of cleanliness. Both standard and bespoke systems are available, with integrated passivation for pre-cleaning and final cleaning of surgical instruments, endoscopes and implants. An array of handling equipment, accessories and chemicals is available.

Equipment and systems can be validated depending on cleaning and throughput requirements. Quality assurance and its documentation use a data logger and system control is to the Food and Drug Administration's FDA 21CFR Part 11 with audit trail. Support for risk analysis (FMEA) and validation of systems and processes (IQ & OQ) are provided.
